

## Climate information for the energy sector

# Variety of Talks

Short term forecast of wind energy

Private Business

(in collaboration with public University and mixed public/private energy administrator)

Medium range hydro-meteorological forecast.

Bi-national hydropower energy.

(in collaboration with several private & public institutions in 3 countries)

Long term planning of Hydropower energy under Climate Change.

National Administration

(in collaboration with several development agencies)

Climate services at all scales for entire electric system

Hydro-solar-wind and energy demand

National administration and public University

# Climate Services

(straw-man classification)

**ENERGY**

Relatively few partners  
Have resources (human & financial)  
Very specific (& changing) issues

# Conference themes

Building useful tools 

Engaging with ~~users~~ partners **Trust** -> **Co-production**

Connecting to policy 

Creating an appropriate infrastructure

Many of the **ethical** dilemmas disappear (shared skin in the game)
