- Gender mainstreaming
- Disaster Risk Reduction
- Private, civil and global partnerships
- Governance issues

Public Health Outcomes Framework

OUTCOMES

Vision: To improve and protect the nation's health and wellbeing, and improve the health of the poorest fastest

Outcome 1: Increased healthy life expectancy
Taking account of the health quality as well as the length of life

(Note: This measure uses a self-reported health assessment, applied to life expectancy.)

Outcome 2: Reduced differences in life expectancy and healthy life expectancy between communities

Through greater improvements in more disadvantaged communities

(Note: These two measures would work as a package covering both morbidity and mortality, addressing within-area differences and between area differences)
